Subject: Republic Services - Deep Injection Well

I am a Newton County resident and am vehemently against allowing Republic Services to put in a deep injection well.

A mere Google Search brings up multiple issues with these wells from Michigan to Florida.

When will there be a public meeting?

I am a resident of Newton County for the past 60 years and I can't believe that the EPA would consider allowing the landfill to put this waste into our soils and possibly contaminate our waters. I have read so many articles where things have went wrong with these wells. Please do not allow them to ruin our counties drinking water . You have to allow the people of this county and surrounding counties to speak on this subject.

Good afternoon Sir,

I am writing in regards to the proposal by Republic Services to direct inject leachate from the Newton County Landfill. I feel that this action has the potential to cause problems for our County for decades to come and would like you and your colleagues to strongly consider denying the request by Republic Services.

I am a resident of the neighboring town of Kentland, however I have lived in Brook, IN in the past, and have friends and family that live in close proximity to the landfill. My point here is that even though I do not live close to the site, I do not want future generations in my community stuck holding the bag when this goes wrong.

I understand that this practice is used in other parts of the country, and there are pros and cons depending on who you talk to, but in the 4 years that I was employed as a state licensed landfill operator for Republic at the Newton County Landfill, I learned a lot about how the company operates, the negative effects of the leachate, and the problems that site has.

Thank you.

Subject: Public comments for Republic Services landfill

Mr. Tong,

What is the process for setting up a Public Hearing on this proposal for the local Republic Services to pump Leachate into our Newton County Ground? I won't speak for any of my other locally elected officials but I don't see this going over at all and I don't understand how this is not a state or local issue and that the Feds are going to allow this company to pump there waste into the Ground. We understand it cost the local landfill millions of dollars to haul and treat this waste, but there has been other options locally that has been discussed with the Landfill to treat this at one of our local facilities but this is the options they go with. For me it is unacceptable to allow a company to pump waste into the ground to save them money.

Please advise on our government local option and if we can get this to a public hearing..

Thanks again for your time.

Michael S. Mark

Regarding Republic waste company and landfill leacheate in Newton County Indiana

I agree with the geologist from Lawrence Berkeley. The water needs to be filtered cleaned and purified not stashed in some underground cavity that is most definitely going to see at some point and cause considerable health damage to someone and probably to food sources.

Dear William Tong,

I am emailing you about the permits applied for by Republic Services in Newton County Indiana. They are wanting to inject leachate liquid waste into the ground. Please do not allow this for the residents that live around here. We have wells. We have children and grandchildren that drink this water. I live about 4 miles (or less) from this landfill. I'm already dealing with the smell. I have to shut my windows here in the country because of methane from this dump site. We do not need our water polluted too. Please I'm asking you to think and consider those of us in the surrounding area. If they inject this deep in the ground there is no way of telling if it will get into the aquifers underneath that we draw our water source from. I am asking for this in order to safeguard the health of all Newton county residents.

Thank you,

I know nothing about you or what you do for the epa, but I have a question for you. If you had children and lived near this site and in a county where they spread literally thousands of tons of cow manure on fields that ultimately finds it way to our rivers and streams, would you allow this? Oh let's also factor in that your drinking water would come from a well and guess where that comes from?? Still think it's a good idea when one of the kids or someone in your house gets cancer from the water they drink and bath in? Give them back the bribe money they gave you for this and grow a spine. I've worked on that site and to the things that get "covered up" is sickening. Last time I checked drainage ditches aren't supposed to build up foam when it rains, and that's in offsite ditches. Please take a minutes to think this through.

Subject: Brook Landfill

Mr. Tong -

Clean ground water is especially important to those of us living in rural areas. We don't have the filtration systems they have in the cities. It's pretty amazing how items work their way up from deep in the earth. Every year farmers have to walk their fields and pick up pretty large rocks that were not there the year before. Diamonds are another example. Water can travel much easier and if it is contaminated there is no way of knowing without regular testing. We Do Not want the Brook Landfill to be allowed to drill wells and inject their leachate waste.

Republic Services has been treating the water remotely for many years. They were aware of this need when they opened the landfill. It would appear that the request for the leachate wells are only a cost savings methodology for them at a potential danger to the ground water system.

Subject: NO leachate deep wells in Newton County IN

Dear Mr Tong,

As a life long resident of Newton county and a resident that lives within 3 miles of the landfill I am definitely opposed to any deep wells here at the landfill in Newton county or anywhere for that matter.

Per the paragraph below from an article in our local publication these wells have various issues nationwide. A ProPublica review of well records, case histories, and government summaries of more than 220,000 well inspections found that structural failures inside injection wells are routine. Over a 3-year period, one well integrity violation was issued for every six deep injection wells examined — more than 17,000 violations nationally. More than 7,000 wells showed signs that their walls were leaking. Records also showed wells were frequently operated in violation of safety regulations and under conditions that greatly increase the risk of fluid leakage and the threat of water contamination.

I can't even believe someone thinks this is a good means of disposing of this liquid waste, not just here in Newton County but anywhere in the world. Once one of these wells fail and that leachate leaks into the aquifer on the way down 1700-5000 feet, the clean safe water that is required to live and maintain life, there's no turning back. We can't "un-contaminate" it once it's happened.

No deep leachate injection wells in Newton County!! Or as I stated earlier why would we do that anywhere?!!

Hoping the EPA and the local leaders do the right thing and reject any and all permits for these type of wells injecting that poisonous runoff into our earth and possibly our aquifer here!

Sincerely,
[REDACTED]

In 10 to 100 years we are going to find out that most of our groundwater is polluted," said Mario Salazar, an engineer who worked for 25 years as a technical expert with the EPA's underground injection program in Washington. "A lot of people are going to get sick, and a lot of people may die." This was copied from an article that I read about the injection of liquid waste from landfills into the ground. The landfill owned by Republic has filed for two permits to be able to do this in Newton County Indiana. I am writing to you to oppose this. Please do not give them permits to do this. I am afraid that this will destroy our drinking water. You can write me back or set up a community meeting with the county commissioners.

Subject: Newton County

Good afternoon Mr. Tong,

My name is [REDACTED] and although I am not a direct resident of Newton County, I am a resident of Jasper County. In fact, I live so close to the county line that I can see the Newton County Landfill from my back yard. I also work [REDACTED], which is a small town about 5 miles west of the Newton County Landfill. Most of us have heard the news about Republic filing permits to inject liquid waste into the Landfill, and it brings us great concern. We already have to deal with the pungent smell of the Landfill, along with the remaining amount of trash that flies out of the trucks and is stationary alongside state road 114. Please, please object to this. We are worried about our water supply, seeing that everyone in that lives in the country has a well to source our homes. Then that brings up the fact that it will ruin property value once things are contaminated. I grew up on a family farm where my Great Grandparents built their home and legacy on, which has been handed down to my grandmother, my parents and now- myself and my 2 children. I would absolutely hate for our land, and other family farms to be ruined from the toxic waste that is being proposed to be injected into the landfill. Please consider the health and safety of Newton County residents as well as the ones in Jasper County .

Thank You,

Subject: Newton County Landfill Proposal

Mr. Tong,

My name is [REDACTED] and I live in [REDACTED] (approximately 4.5 miles from the Newton County Landfill) with my pregnant wife and one year old daughter. I purchased a house in June of 2019 here in Brook keeping in mind that the landfill has a barrier and that our water supply will be protected, clean, and safe. I no longer feel confident that our local environment is being protected and that contrary to the EPA's statements on deep injection wells, our drinking water source is now in danger of contamination. I have the benefit in this situation of having been employed at the Newton County Landfill by a subcontractor from 2016 to 2017. I understand what toxic chemicals and heavy metals are found in leachate. I have several questions that I believe our community deserves to have answered for them. How will the wells be monitored and violations enforced? According to the website Propublica in their article titled 'Injection Wells: The Poison Beneath Us' the author states there have been 17,000 violations for well integrity in these deep injection wells just between 2007 and 2010. Why would any local support these permits that Republic Services has filed? If there is a leak or fracture in the encasement (assuming it is reported or caught by the EPA) then what action will be taken to fix the structural barrier? In 2019 Republic Services grossed \$10.3 billion and net income was \$1.07 billion. I know these deep injection wells will save Republic Services millions of dollars every year and that the EPA has the opinion that trucking leachate to wastewater treatment plants is worse for the environment than injection leachate deep into the ground. I also know there are alternatives to this proposal by Republic Services and that they have the money to afford alternatives. The very least that the people of Newton County deserve is a public hearing on this matter. Our county does receive a lot of money from Republic Services in order to bear the burden of Chicago's waste disposal but do we also need to risk contaminating our water in order to take in Chicago's trash? I can guarantee that there will continue to be organization in opposition to this proposal and that we will not give up even if the permits are approved. The fact that this was pushed through in the middle of a public health crisis, a few weeks before the presidential election, and without sufficient notice to the public is deeply disturbing, however I am not surprised. I pray that the EPA will advocate on protecting a rural community's drinking water and environment rather than being on the side of big business that is so callously destroying the environment.

Thank you for taking the time to read my concerns,

[REDACTED]

To: Tong, William
Subject: Concerning the permit for class I injection wells at the Newton County Landfill

To: William Tong, Water Division, EPA Region 5

I am writing to you concerning Republic Services' plan to install two Class I injection wells at the Newton County Landfill. My concern is twofold. First, I am concerned about the potential long-term ecological and public health effects of the wells. Second, I am concerned about the ways that our community has been bypassed in the consideration of these wells.

The Class I injection wells will allow waste to pass through our water supply and be deposited in the earth well below the water table. According to the EPA, this type of injection well is deemed relatively safe. However, there are studies that show numerous hazards with these kinds of wells. There is at least some potential for ecological damage and corruption to our water supply, neither of which can be reversed.

Though Republic Services owns the landfill, they do not own the water. In the very least, the water beneath our feet is the common property of everyone who uses water in this community. Even more, it also belongs to those who will come after us; our grandchildren and great grandchildren. It belongs to all creatures who derive life and pleasure from our lakes and streams. As a pastor, I cannot fail to mention that I believe this water ultimately belongs to God, who brings forth water from the earth to sustain all living things (Psalm 104).

Perhaps our concern for the ground water is unfounded. Perhaps the installation of these wells poses no real threat to our groundwater. Even so, there is still the issue of public trust and societal health. This brings me to my second concern. As is often the case, we realize that a small community like ours has very little political voice in matters like this. We have neither the population nor the money to oppose large scale operations that might pollute our water, air, or soil. Yet, this is our home and we believe we should have a voice.

It seems that there is no law to prohibit the installation of the wells. Therefore, the only weight this plea carries is an ethical one. I am asking that you consider the concerns of the people that live in this community and the potential long term ramifications that these wells may have on the land and the people. Republic Services does not have to install these wells. Instead, they can continue to use the more expensive refinement process that they are currently using. Their profits should not be placed above the concerns we have for our health and land. In the very least, I am asking that you give the people of this community a chance to thoroughly review all the potential issues with the Republic's installation of the injection wells, and to have a choice in whether or not the wells can be installed.

This community is not merely a cheap dumping ground for waste. It is a place where people live and a place that people love. In this small community, I often hear people use the phrase, "love where you live," and this love extends not only to the history of our towns but to the very ground beneath our feet. We want the goodness of this place to be available for generations to come.

Sincerely,

[REDACTED]

From: [REDACTED]
Sent: Thursday, October 29, 2020 6:32 PM
To: Tong, William
Subject: Newton County, Indiana Landfill

Dear Mr. William,

My name is [REDACTED], and I am reaching out to you in regards to the construction of two wells being drilled at the Newton county landfill in Brook, Indiana. My family, members of my community, and myself are greatly concerned with the potential hazards that can come from this. Leachate, also referred to as "garbage juice" contains chemicals and hazardous materials such as: Ammonia, Zinc, Lead, Mercury, and many other dangerous contaminants.

Until recently, the Newton county landfill has paid millions of dollars annually to transport leachate to be filtered, and treated before the liquid is reintroduced back into the environment. If the permits are approved to dig it will stop the containment, and cleansing process of the leachate, resulting in potential groundwater contamination.

Effects of ground water contamination include: Drinking water quality, loss of water supply, degraded surface water systems, high cleanup costs, high costs for alternative water supplies, and potential health problems. These issues will not only affect Newton county residents, but as well as surrounding counties, farmland, livestock, and wildlife.

I believe that the digging of these wells go against The Safe Drinking Water Act (SDWA), The Clean Water Act, The Resource Conservation and Recovery Act (RCRA), and The Comprehensive Environmental Response, Compensations, and Liability Act (CERCLA). These acts are designed and regulated to ensure protection of all water systems, aquifers, groundwater, drinking water, surface water, and as well as treatment, storage, and disposal of hazardous wastes.

With that being said, I feel the above acts are not being held to their upmost responsibility and are being overlooked. The planning and drilling of these wells are not ethical and need to come to an end. The EPA needs to be held responsible for this, and I hope they take immediate and effective action towards this matter. I appreciate your time, and I hope to hear back from you regarding this matter.

Sincerely,

Mr. Tong,

As a lifelong resident of Brook and a current community leader, I ask that you please stop Republic Services' quest of underground injection wells. I stand with my community members in opposition to this potentially hazardous project. Our community has worked with and made sacrifices for the landfill, and this is one that should not have to be made. Residents should be able to feel safe using their well water. Farmers shouldn't have to fear for the quality of their land. Republic Services should be listening to the people in their community; the people that welcomed them and have considered them community partners. This isn't wanted. It isn't welcomed. It is creating a lot of fear and anxiety among the community members.

As the public librarian, I get regular requests as to how people can help stop this. When we explain that emails are welcomed, a lot of our residents don't utilize or have access to email. Please know that there is much more opposition to this project than what you are hearing about, although I am sure you are hearing a large amount.

Please help us protect our home and our peace of mind.

Best,

Kristine Wright

My husband and I with our 2 sons just moved to the Newton county area. We have an older house which has a well. This is very concerning to us. We already have to pay \$100/ month to filter our water to still not be able to drink it (high sulfur levels). Say this passes and the deepwell fails what happens to our water? How far from the deepwell will water be affected? What would happen to the water if it does fail? Yes we don't drink our water already but we obviously use it to bathe. My 2 year old and 7 month old will drink it while playing in the tub. How often do these wells fail? How many have been done before and of the ones already done how many have failed?

Looking forward to answers,
[REDACTED]

Tong, William

Subject: Republic Services seeking to inject liquid waste from Newton County Landfill into the ground

Dear Mr. Tong:

I must register my overwhelming concern over the proposed plans of Republic Services involving their liquid waste products and their intention to pump said waste into the ground in the region on our water aquifer. These permits must be denied by you and the EPA. I can't imagine how these wells can be said to be safe, especially over a period of time. ProPublica review of well records, case histories and government summaries show that these types of wells routinely fail. Water is our most important resource, without which there would be no life - I ask that you summarily deny Republic's permit request.

Thank you for your time,
Warmly,

[REDACTED]

Subject: Newton County Indiana landfill wells

To whom it may concern,

Please do not let this happen, not only for the residents of this county but for everyone. Our water should not be polluted while landfills make large sums of money , they have been supposedly paying to have this wastewater hauled away and treated In my opinion they should continue to do so , so what if they have to spend a large sum of money which cuts into their profits ,it's better than risking probable health to humans.

How will anyone monitor what they inject in those wells? What about in the future when people possibly get sick from this long after the landfill is closed?

I again beg you to NOT let this happen.

Thank you

Dear Mr. Tong,
I am attaching a letter concerning our local landfill, owned/operated by Republic Services.

Please take a moment to hear out our concerns.

Thank you,
[REDACTED]

November 2, 2020

Dear Mr. William Tong,

We are writing you today to express our utter disgust and disappointment in the current situation with Republic Services in Newton County, Indiana. My family and I live approximately [REDACTED] and have recently learned of the plan for Republic Services to inject landfill leachate as well as possible other wastes into an underground source. Whether this is safe or not, it is not acceptable to those of us that live around the area, as well as the residents of Newton County and surrounding areas. According to the news article by the Newton County Enterprise from 10/15/2020, the landfill does not have to have county permission to go ahead with this project that could potentially compromise our drinking water more so than it already is. The news article states that according to "A ProPublica review of well records, case histories, and government summaries of more than 220,000 well inspections found that structural failures inside injection wells are routine. Over a 3-year period, one well integrity violation was issued for every six deep injection wells examined -- more than 17,000 violations nationally. More than 7,000 wells showed signs that their walls were leaking. Records also showed wells were frequently operated in violation of safety regulations and under conditions that greatly increase the risk of fluid leakage and the threat of water contamination." Any other farm or agriculture operation that would try anything similar would be shamed publicly and their thought of continuing with something of this nature would be brought to a screeching halt in a moments notice. Continuing to allow something like this to happen is unacceptable.

We moved to our residence in 2014 to raise our family as well as our small flock of high dollar show lambs that our children show around the state. Shortly after we moved in in 2014, the Newton County Landfill paid for our well water to be tested and the test came back with the highest number of possible contaminants and was unsafe for drinking. This was a huge disappointment as we were assured when we purchased this home that it had been tested in 2009 and the water was safe to drink. We understand the concerns of drinking water from a well, instead of water that is filtered and has chemicals added to it as you might have within a town or city. We are not only concerned about the safety of our water for ourselves, but also for our animals. The chemicals that are to be injected into the injection well are currently ran through lots of filtration and tests to take out the chemicals (ammonia, zinc, lead, mercury, other heavy metals, etc). This tells me that they are not safe to be consumed, let alone injected into the earth in any form. The possibility of leakage out of the deep is actually very possible, therefore throughout the next unknown number of years, this will not only effect the drinking water in the local area, but it will leak out into the neighboring communities costing them more money to treat their water to make it safe for their communities, as well as effect our crop production and safety of the water that not only our animals drink but the surrounding farms within our local community.

Our plan, as a family, was to make Morocco our home. My husband works a full-time job and I am a homemaker and stay at home with our child who will eventually be attending our local school district. Injecting this "garbage juice" into the ground could have a lasting impact on not only each individual family and farm, ours included, but also the local government. Something of this nature could have a negative impact on the housing market in this area. It is already hard enough to sell land and homes in the Newton County Landfill area, but then to think about something like a 'non toxic

waste' being injected into the ground would make the area much less appealing to future home buyers and sellers. If property values decrease, property tax values decrease which takes away valuable money from the local government. This in turn also takes away from the money from the local school districts and our educational values decrease.

My point here is that there is absolutely no way that injecting this 'garbage juice' could not be harmful to our earth as well as the local communities, no matter how far the landfill and its decision makers choose to inject the leachate into the ground. This will have an ongoing and long-term effect on not only the residents that occupy the homes/residences around the Newton County Landfill immediate vicinity, but as well as the government and local communities. This is something that needs to be terminated immediately.

Sincerely,

A black rectangular redaction box covering the signature area.

Subject: Opposed to Injection Wells at Republic Services, Newton County Indiana

Hello Mr. William Tong,

I am an Newton County, Indiana resident and would like to express my concern and opposition to Republic Services installing Injection Wells at their Newton County Indiana landfill site.

I am extremely concerned about the water contamination that will likely occur as a result and the many wells that will be affected. Please, please, do not permit Republic Services to install and operate injection wells.

Please let me know if you need this correspondence in written and mailed form, rather than an email.

Sincerely,

Subject: IN-111-11-0001 (Well No.IW-I) & IN-111-11-0002 (Well No 2 IW 2)

Dear Mr. Tong,

I am one of many concerned citizens in Newton County Indiana that opposes the installation of the two injection wells at the site of the Republic Services Newton County Landfill. My home is less than three miles from these proposed wells and from what I have researched about them over the past few weeks, they pose a serious danger of contamination to our local water supply and the water supply in a very large surrounding area as the aquifers this is going to pass through are large and run to two area rivers. Everyone in this area relies on well water for human consumption and farming operations, whether it be via a private well like I do, or through city water that also comes from wells. To quote a few of the experts cited in the article by Propublica. "Injection Wells: The Poison Beneath Us" "But in interviews, several key experts acknowledged that the idea that injection is safe rests on science that has not kept pace with reality, and on oversight that doesn't always work.

This is just one of the many articles I have read. I have found multiple instances of failures of these wells leading to contamination, some from misuse, others from poor installation, and others yet from lack of understanding of area geology that couldn't handle them. I have also found many cases of injection wells leading to an increase of earthquakes in the area. The community around these wells deserves a say in this. We also deserve answers to many of our questions such as who did the study of our area geology and hydrogeology to guarantee it can even handle this? Who is going to be overseeing this? From what I read in the permits it looked like Republic has to do certain tests and keep different records but who is responsible for ensuring these records are not falsified? Are surprise visits going to be done to ensure there is no misuse, as this has been raised as a huge concern from those who work there and see how they operate and how little oversight IDEM currently provides. Who is being hired to drill this well and how do we research their track record? Who is benefiting from this financially other than Republic? Who will be testing our wells and aquifers and how often? Will they be offering this service to us for free? Who is going to buy our properties and payoff our mortgages if our water does get contaminated? Why can't a billion dollar company like Republic find another viable alternative, or continue doing what they are doing? Is adding to their already multi billion dollar profits more important than the health of this community? We hope that your office will rethink these permits, but at the very least we deserve a community hearing and answers.

Thank You

Subject: Newton Co injection wells complaint/concern

Hello Mr. Tong,

I am in Indiana state soil scientist as well as a concerned citizen of Newton County. It is my hope that you will consider denying access to Republic services for their planned injection wells. As a soil scientist I know how dangerous this can be as our water tables in this county are naturally very high. In my professional opinion this will affect groundwater negatively for future generations to come. As you probably know our county exist in what used to be an old lake bed which means our water table is much higher than other counties due to being at a naturally lower elevation. Although these wells are deep it's not impossible for contamination to happen and not a risk we want to take with so many small children in the county. I am very concerned about the effect this will have on our county if this is approved. Our county citizens did not have a say in this matter, they went above our heads and have planned this without our consent. I have two small children under the age of three and I worry about their futures and the cleanliness of their drinking water for generations to come. I ask you to consider if this was your family would you feel safe with this injection well so close to home? I hope you consider my professional opinion and also the opinion of a concerned parent and citizen. This is the The future of not only our county, but the individuals that live in our county. What is the most upsetting is the lack of transparency that republic services has treated us with. And not giving us an option, Which is the most disturbing part. Please do not let this company go above our citizens approval and do what they want. I hope and pray that you can stand up for us and stop this. Is there anything that we can do to stop this from happening? I am not the only one in the county that is extremely concerned about this. Do you have any suggestions going forward about how to stop republic services from putting in these injection wells? Thank you so much for hearing my concerns and taking questions.

Have a great day, [REDACTED]

EPA Region 5 Water Division

Newton County Landfill

This email is to voice my disapproval of the EPA approving Republic Services building any injection wells. It is also intended to disapprove the injection of any substances into the ground, regardless of the proposed depth, and to disapprove of the disposal of supposed non-hazardous liquid waste from the landfill into the ground at any depth. The EPA in my opinion is not trustworthy enough to maintain the vigilance needed to not only guarantee the depth is accurate, but also to analyze and prove the substances injected are in fact non-hazardous. The EPA says itself there SHOULD be no environmental impact, but they do not know for certain. Once the injection is done, there is no way to get it back and the damage would be done.

Mr Tong

We are asking that Republic Services be denied their request for injection wells in Newton County Indiana.

Should there be a failure in managing these deep wells, we are worried about groundwater contamination which can have detrimental effects.

Newton County is a mostly rural farming community. Many of the residents have private wells and we are one of them. We count on the EPA to help us protect our ground water.

Thank you for your part in helping us keep our drinking water safe for generations to come.

Hello, This is [REDACTED] of Newton Co., I live about 3 straight miles from the landfill and my son lives 1 mile from it. I am asking you to PLEASE deny "Republic" on their request for their "deep injection wells". The residents around the landfill have been subjected to so much already! The smell in the air, the visual of having to look at it daily, the endless trash that blows out and now the water quality. PLEASE give us a break, i'm begging you! The Commissioners and/or whoever approved of this idea, do not live anywhere near the landfill. It's so easy for them to approve, they don't have to drink the water. We already have to be subjected to all the Dairy cows, chicken and pig manure that is injected into the ground around here. How much more do we have to take? I understand that this will be far down into the ground under the water line, but there's no way that this can be safe, even with all the precautions that would be in place. In closing, please be on the side with the residents of Newton Co. Thank You for your time, [REDACTED]

Subject: Republic Services in Newton County

Please do not approve Permit IN-111-1L-0001 and IN-111-1L-002. These are permits for 2 deep wells in Newton County Indiana. They produce @ 200,000 plus gallons of Leachate a day, many days more than that. With that quantity of fluids going into the ground every day something is bound to go wrong. I know that the Leachate has been partially been treated but there is still some Mercury, Hexvalent, Chrome and other heavy metals left in the liquid. If the truck expense is the issue then they need to put up a treatment plant so they can treat it themselves. At least when you have an issue on the earth surface it's easier to catch and fix. But when your talking 5000 ft. Deep or more, many things can and will sooner or later go wrong. You have to remember that they will be treating Leachate for many years to come. They have issues trying to treat it now. With pipes breaking or plugging, pumps leaking. To many Health and Safety issues for humanity now and into the future.

Thank You for your time, (Please deny the Permits)

Subject: Newton County Landfill

Sir,

I am a resident of Morocco, Indiana and live on a farm about [REDACTED] [REDACTED] in Newton County. We are very nervous about the prospect of your agency granting Republic the necessary permits to inject leachate into the ground. The majority of residents in this area have their own wells for drinking water for themselves and their livestock. My wells are both in the neighborhood of 350 feet deep. Our water does not come from a water tower or treatment plant where it is regularly tested. We live here, work here and raise our nation's food supply here. The prospect of our water supply being endangered, not only threatens our health, it threatens our property values and our livelihoods.

Below you can see that I have attached a link to a ProPublica.org article that discusses injection wells and your agency's role regarding their operation. The more striking things I took away from the article were the suggestions that "structural failures inside injection wells are routine" and injection wells "are frequently operated in violation of safety regulations". I have first-hand knowledge of the operation of the Newton County landfill and have grave concerns about Republic's ability to safely operate and maintain these types of structures. Furthermore, I have concerns about the lack of oversight when it comes to Republic Services protecting its bottom line over and above safety and maintenance requirements.

My request is, at best, your agency deny these permits or at least require public hearings so that Republic can be held accountable to its neighbors in the true spirit of the Good Neighbor Agreement they entered into with the county some 20 plus years ago when they first came to our county.

The Newton County Landfill is a danger on the surface of the earth and this will make it a danger to the inner earth. Landfills leak and these wells will eventually leak. Guaranteed!!

The system to convert leachate to water may be expensive but Republic is making plenty of money off of trash.

Another concern is the ad in the local papers for workers for this project. No experience is necessary?? Who is doing this work? Surely it needs to be someone who knows what they are doing. Our water is in jeopardy as it is with the dairies in our neighborhood. Our water supply disappeared and we had to drill a new well. The taste of our water changes from time to time to the point that we buy drinking water. And it is NOT a sulfur taste because we both lived with sulfur water for many years before moving here.

Sincerely,

[REDACTED]

Please see that your agency denies the permits to drill deep wells and inject leachate into the ground. I can see the landfill from my home and my farm. Our water supply and soil fertility is what has allowed us to continue to provide corn, soybeans, and beef on this ground for over 100 years. I farm two Centennial Farms within three miles of the Newton County Landfill. It would be a shame if Republic Services stockholders are to benefit at the expense of those that have lived here, and cared for the ground for over 100 years.

Subject: concern over deep injection wells

Dear Mr. Tong,

My husband and I are very much opposed to these underground injection permits being granted for Republic in Newton County. We were both born and raised in Newton County. We could not have chosen a better place to grow up. Our children and several of our grandchildren also grew up here. This has been a very healthy place to live.

Forty five years ago we started our own business here in Newton County.

The business is still here and will stay as long as we are able to keep it going.

Republic is saying that this will greatly reduce the number of semis on our county roads. That's a lie because the large number of semis are bringing the trash in. The number of semis hauling leachate out to Kankakee, IL or to Gary, IN for treatment is much smaller.

Currently, our well water is excellent! It is some of the best in the county. We don't need a softener or any other treatment and we want to keep it that way.

We know that by drilling these injection wells, our health here in Newton County will be in danger. These injections are not fool proof.

It is documented that there have been failures where the stuff that they are drilling in, comes bubbling up through the ground. Common sense tells us that anything with that power is not healthy for human beings to have near their water supply and the ground where the food is grown!

Please reject these permits so our county stays healthy for all little grandchildren and great grandchildren living here now and those in the future!

Thank you from two proud Newton County citizens!

As concerned citizens in newton county and after doing extensive research we do not feel these plans are in the best interest of our homes and community.
This is not something we want here. The lack of transparency as well as facts of what will happen to our god given rights to clean water. Who is going to pay for clean up when these fail and infect our wells? Who is going to pay for the testing of our wells and who is going to absorb all the costs as in May other areas they have destroyed so much.? We the people have the right to be heard, we are a constitutional republic. It is unacceptable to ram this down our throats with no community feedback! We pay taxes here and we have rights under the clean drinking water act! Money and greed and kickbacks should not come first... would you like this in your back yard?
Thank you for your time

RE: Republic Services Injection Wells, Newton County (IN) Landfill. Public Notice: Proposed Class I Pmits IN-111-1I-0001, IN-111-1I-0002

Dear Mr. Tong:

As a new business and property manager in Newton County, we are very concerned about permitting which would authorize the disposal of "non-hazardous" liquid waste from landfill leachate, landfill gas condensate, well maintenance and testing fluids, and stormwater runoff generated at the Newton County Landfill facility into an area underground our communities' underground source of drinking water. From research, we are aware of issues with deepwell injections in Michigan and Florida; for example, studies on the cumulative effects of contamination on aquifers.

We support a public hearing scheduled by EPA. Our residents deserve more information and the right to oppose actions which have deleterious environmental and health effects on our drinking water, protected lands, fishing, agricultural practices, and overall quality of life.

Thank you for your attention to this matter.

Sincerely,

[REDACTED]

Subject: Newton County Indiana Leachate Injection Wells

William,

We already have a landfill in Newton County. Why would we want to incur double jeopardy by placing another type of garbage disposal in our county.

We are landowners, homeowners, and farmers within 2 miles of the landfill. It is possible that the Madrid Fault Line could cause an earthquake sometime. What if that changed something in our underground geography? How can we be 100% certain that this wouldn't happen?

Isn't it bad enough that the landfill has the potential to poison our drinking water from above the ground?...so why would we want to potentially poison our water from below the ground as well.

We feel that this could only be a detriment to our future land use in Newton county, a detriment to our future land values in Newton County, and a detriment to all future residents of Newton County. We see no reason to take the risk of making the county a potentially lesser place for our children and grandchildren to grow and thrive in.

Thank you for this consideration.
